**Tradition meets the Future**

In the late seventies, the Stanford Heart Team asked Jake Scholten to provide them with a high quality endomyocardial biopsy forceps. That instrument, known as the Scholten Biop tome, has been trusted for its uncompromising quality and reliability. The latest Scholten disposable Biop tome model is called the Novatome™ and, like its predecessors, is specially designed to acquire maximum specimen size for more accurate pathology results. With a reputation for its ease of positioning and heart rhythm feedback, Scholten Biop tomes have earned high praise.

The new Novatome™ disposable model makes Scholten the best choice for safety and precision. Clearly, with a pedigree of more than 30 years of clinical experience, the new disposable model Novatome™ will continue to set the standard worldwide.
